MOLD TESTING PACKAGES

Tape Lift/Bulk/Swab: \$25 each

Tape lifts are the easiest sampling method used for mold testing. These are the most popular for homeowners and professionals alike.

Bulk samples can be nearly anything that is sent to the lab for mold analysis. We will take a tape lift or swab from what was submitted and analyze to determine if there is any mold present.

Swab samples are sampled in the field and sent into the lab for mold identification.

Air Samples: \$29.00 each

Analysis of either Micro 5 or Air-o-cell sampling cassettes.

The Basic Mold Package: \$250.00

The basic mold consists of a technician traveling to your property and sampling one outdoor control sample and two indoor air samples. One of the air samples can be exchanged for a tape lift.

The Full Mold Package: \$395.00

The full mold package is intended to be a whole house inspection for mold.

Package includes:

1 air sample on each living floor of the house. Outdoor control sample. Tape lifts or swab samples of anything visible or suspicious during our thorough inspection of all accessible areas in the house including the attic, basement, and crawlspace.

A Comprehensive Laboratory Report Summary is showing analytical results in an easy-to-read format.
